

ERP System

Project Idea :

Creating an ERP system to help employees overcome any obstacles they may face during the daily tasks and to improve the system. The application will improve the way tasks and projects are delivered to the team leader. It will also help in creating better communication between the team members and the supervisors. Employees will have a better experience and feedback about their codes, tasks and projects through **the following features :**

As an employee :

- He will have access to the tasks assigned to him via the application.
- The ability to upload his code and tasks to the site for team leader to review and give a proper feedback.
- He will be able take an assessment test every specific period of time and see the reviews.
- He will have a private calendar to save whatever he wants on it.
- He will have access to a public calendar to the deadline for each task or project, a notification will be sent to each employee before any deadline.
- He will be able to see the his assessment results and a schedule of tasks for the week.

As team leader :

- He will have the ability to upload and assign tasks to the site directly.
- He will have the ability to give feedback on each task employee finish.
- Review each employee assessment and give a feedback.
- Edit the public calendar to add the deadline for each task or project.
- The ability to write posts about important stuff like employee of the month, etc ...

As for the manager :

- He will be able to do what team leader can do **plus:**
- Accept employees to join in.
- Accept team leaders and assign their roles.
- Send notifications for employees and team leaders in case of table changes, etc ...
