

PHP Project (Shopping App)

- Home Page
 - Search for products
 - Filter by category (All - Samsung - LG - Nokia - Apple)
 - View Products (each product should have [name,price,photo,description(first 100 chars)])
 - each product has button [add to cart] by AJAX
- Login Page
- Signup Page
- View Product page (view full description not just first 100 chars)
- View Cart (show all added product to the cart and you can remove one from ur cart with total price of all added products)
- Add Product page (add product to category)
- Profile page (your account information and button for edit my profile info)
- Edit profile page (edit your information and return to your profile view)

Important Notes related to project:

- add product only for admin
- cart should be saved on session
- search for products should handle by AJAX autocomplete jquery plugin
- incase of not login user
 - you can't add to cart
 - you cant add products
 - you cant open any page (only home page,register,login)
- incase of logged in user (GENERAL_USER)
 - you can use "add to cart" button
 - you cant add product
 - you can you can view ur cart
- incase of logged in User (ADMIN)
 - you can do what GENERAL_USER do
 - you can add product

Important PHP Notes:

- try to be OOP as much as you can
- do you database according to requirement
- handle all validation in forms as much as u can

Bonus Features:

- edit product incase of admin
- delete product incase of admin
- on view product page
 - add review (text and rate[1,2,3,4,5]) at the end of the page to write review to the product
 - show reviews for each product at the end of the view product page
 - show average rate for each product on view product page
 - add average rate for the product in home page beside each product
